

CLARK THOMPSON

(205) 261-9131 • clarkt1822@gmail.com • [LinkedIn](#) • cjthompson.tech

AI & Data Solutions Specialist

AI & Data Solutions Specialist with experience implementing AI, automation, analytics, and CRM-driven operational systems. Skilled at translating technical concepts into practical business solutions that improve workflows, reporting, and decision-making.

Core Skills

AI Engineering and LLM Systems

OpenAI APIs, Retrieval-Augmented Generation (RAG), LLM system design, prompt engineering, structured outputs, NLP classification, embeddings, semantic search, evaluation pipelines

Data & Analytics

SQL, Python, ETL pipelines, data modeling, KPI architecture, predictive forecasting, Tableau, Power BI, Excel, Google Sheets, Supabase (Postgres), AWS

CRM & Customer Data

Salesforce CRM, ServiceNow, CRM analytics, large-scale data environments, pipeline analytics, operational reporting,

Automation & Integrations

Service Catalog Development, REST APIs, webhooks, workflow orchestration, system integrations, cloud deployments (Vercel)

Customer Consulting & Enablement

Technical discovery sessions, stakeholder advisory, translating technical systems into business value, solution architecture planning, IT Service Management (ITSM), Enterprise Systems Support

Education & Certifications: Bachelor's Degree (B.B.A.) | Agentblazer Champion and Innovator | DataCamp AI Fundamentals | DataCamp Data Literacy

Experience

Functional Analyst – University of Alabama at Birmingham

May 2026 - Present

- Develop and maintain ServiceNow catalog items, workflows, and operational processes supporting internal university departments.
- Configure and optimize workflow automation within ServiceNow to improve request handling and operational efficiency.
- Query business and financial data using SQL to support reporting, analysis, and operational decision-making.
- Write and modify JavaScript/Python-based scripts supporting platform functionality, automation, and process improvements.

AI Consultant (Contract) – AutomateNexus

Jan 2026 – April 2026

- Design and implement AI-driven automation systems using OpenAI APIs, REST integrations, and workflow platforms.
- Translate complex AI and data architecture concepts into actionable implementation strategies aligned with business goals.
- Architect data transformation pipelines enabling intelligent classification, automation, and decision-support workflows.
- Advise organizations on best practices for integrating AI capabilities with CRM platforms and operational systems.

Automation and Data Lead (Co-Founder) – SimWorld LLC

Nov 2022 – October 2025

- Designed and deployed RAG-based LLM system leveraging structured sports article databases and OCR-ingested datasets to generate contextual player analysis.
- Built data preprocessing pipelines in Python and SQL to clean, normalize, and structure large datasets for downstream ML and analytics workflows.
- Implemented structured logging and output validation to improve reliability and reduce hallucinated responses in LLM outputs.
- Collaborated with engineering teams to validate backend systems and ensure scalability during rapid platform growth.
